

## Course Descriptions International Computer Science Winter Semester 2024/25

4 July 2024

German (different course levels) .....	2
English in Technical Contexts B2.....	3
Intercultural Training for Germany and Bavaria.....	7
Basics of International Sales and Business Development .....	9
Bavarian Culture .....	11
Business Storytelling.....	13
Scientific Communication.....	15
Databases .....	18
Informatics I.....	20
Innovation Management for Artificial Intelligence .....	23
Quantum Computing.....	25
Mobile and Wireless Networks .....	27
Advanced Automation .....	29

## German (different course levels)

---

<b>Course title</b>	see schedule Language Centre
<b>ECTS</b>	4
<b>Course type</b>	Seminar
<b>SWS</b>	4
<b>Semester</b>	Winter and Summer
<b>Workload in hours</b>	60 hrs
<b>Assessment method</b>	Written examination, 90 min.
<b>Language of instruction</b>	German

---

Please find here the course descriptions for German language courses at all course levels:  
<https://th-deg.de/en/students/language-electives#german>

## English in Technical Contexts B2

---

<b>Course title</b>	English in Technical Contexts B2
<b>ECTS</b>	2
<b>Course type</b>	Language training course
<b>SWS</b>	2
<b>Semester</b>	Winter and summer
<b>Course level</b>	<p><b>B2</b></p> <ul style="list-style-type: none"><li>• Can understand the main ideas of complex text on both concrete and abstract topics, including technical discussions in his/her field of specialization</li><li>• Can interact with a degree of fluency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party</li><li>• Can produce clear, detailed text on a wide range of subjects and explain a viewpoint on a topical issue giving the advantages and disadvantages of various options</li></ul>
<b>Lecturer</b>	Neal O'Donoghue, MA
<b>Course objectives</b>	<p>This course aims to deepen students' encounter with the English language in a technical context by giving practical training in specialized vocabulary, grammar and language usage. The four cardinal language skills – listening, speaking, reading, and writing – will play an integral role in this training.</p> <p>The course is designed to be relevant and interesting for engineering students and will be adapted to their learning needs and study areas.</p>

---

---

By the end of the course, participants should have a more comprehensive understanding of, and enhanced fluency in, the English language in an engineering context.

---

**Course contents***Obligatory topics (60 %):*

- Numbers and mathematical operations
- Shapes and dimensions
- August 2017
- Basic physics and the scientific worldview
- Materials and their properties
- Case study on an area related to technology
- /physics/engineering
- Grammar/ communication skills

*Variable content (40 %):*

Variable content will be determined on the basis of a student survey conducted in the first session.

Current world events (including news events and popular culture) and recent technological innovations may be used as a basis for discussions.

---

**Teaching methods**

Teaching methods focus on improving the four cardinal language skills and include group discussions and group projects; individual work; mini-presentations; role-plays; close reading and listening activities; dictation; grammar games; and various follow-up viewing and writing activities.

Work not completed in class should be done at home. Self-study assignments will be set on a weekly basis.

---

Written exam (60 min)

**Assessment method**

No dictionaries are allowed.

Exam structure:

- Part 1: Listening comprehension(s)
  - Part 2: Reading comprehension(s)
-

- 
- Part 3: Vocabulary and technical content
  - Part 4: Grammar (maximum 10% of total exam points, excluding writing exercise)
  - Part 5: Writing composition (150-200 words)

The exam will be based on topics covered during the semester.

The exam will be based on topics covered during the semester.

## Intercultural Training for Germany and Bavaria

<b>Course title</b>	Intercultural Training for Germany and Bavaria
<b>ECTS</b>	1
<b>Course type</b>	Elective
<b>SWS</b>	1
<b>Semester</b>	Winter and summer
<b>Workload in hours</b>	30 hours
<b>Name of Instructor</b>	Lisa Werner
<b>Course objectives</b>	Participants get an understanding of the different theories of “culture” and learn about stereotypes and traditions in Bavaria. Furthermore, the participants get information on Germany and Bavaria as well as the Deggendorf Institute of Technology.
<b>Course contents</b>	<ol style="list-style-type: none"> <li>I. Culture (theroies)</li> <li>II. Customs and Rituals in Germany/Bavaria</li> <li>III. Information on Germany and Bavaria and the DIT</li> <li>IV. Quiz and Presentation</li> <li>V. Culture Shock</li> </ol>
<b>Recommended literature</b>	<p>Bolten J. und Ehrhardt C., Interkulturelle Kommunikation, Verlag Wissenschaft &amp; Praxis 2003;</p> <p>Bolten J, Einführung in die interkulturelle Wirtschaftskommunikation, Vandenhoeck &amp; Ruprecht 2007</p>
<b>Teaching methods</b>	The course is organized according to four pillars:

- 
1. Culture
  2. Customs and Rituals
  3. Information on Germany/Bavaria
  4. Culture Shock

Whereas hard facts are taught in a classical lecture style, students will do lots of role-plays, critical incidents, short movies and do a quiz.

---

<b>Assessment method</b>	Paper
--------------------------	-------

---

<b>Language of instruction</b>	English/German
--------------------------------	----------------

---

<b>Prerequisites</b>	None
----------------------	------

---

## Basics of International Sales and Business Development

<b>Course title</b>	Basics of International Sales and Business Development
<b>Course ID</b>	268
<b>ECTS</b>	2
<b>Course type</b>	Lecture with group work and presentations
<b>SWS</b>	2
<b>Semester</b>	Winter and summer
<b>Lecturer</b>	Ibrahim Waked
<b>Course objectives</b>	General knowledge of international sales and strategic business development mechanisms. As well as profound analysis of practical case studies.
<b>Course contents</b>	<ul style="list-style-type: none"> <li>• Basics of sales and business development</li> <li>• Analysis of market potential including cultural &amp; political aspects, correlation between microeconomic and demographic aspects, (PESTELO analysis)</li> <li>• Relevancy of world bank reports on general economic performance and their implementation in company BD strategy</li> <li>• Market entry and risk management</li> </ul>
<b>Recommended literature</b>	<p><b>Strategic Management</b> by Richard Lynch von Pearson Longman</p> <p><b>Business Development Management</b> By Lutz Becker, Walter Gora, Tino Michalski</p>
<b>Teaching methods</b>	Lecture with integrated project development examples

---

**Assessment method**      Presentation and seminar paper

---

**Language of instruction**      English

---

## Bavarian Culture

<b>Course title</b>	Bavarian Culture
<b>Course ID</b>	229
<b>SWS</b>	2
<b>Semester</b>	Winter and summer
<b>ECTS</b>	2
<b>Course type</b>	Elective
<b>Language of instruction</b>	English
<b>Name of lecturer</b>	Manuela Krawagna-Nöbauer
<b>Course objectives</b>	Participants get a deeper understanding of the traditional and contemporary Bavarian culture by integrating knowledge about customs, language, and history with culturally routed events.
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1. Hard facts           <ol style="list-style-type: none"> <li>1.1. History</li> <li>1.2. Demographics</li> <li>1.3. Geography</li> </ol> </li> <li>2. Customs and rituals           <ol style="list-style-type: none"> <li>2.1. Traditional</li> <li>2.2. Contemporary</li> </ol> </li> <li>3. Language</li> <li>4. Events</li> </ol>
<b>Teaching methods</b>	<p>The course is organized according to four pillars:</p> <ol style="list-style-type: none"> <li>1. Hard Facts</li> <li>2. Customs and Rituals</li> <li>3. Language</li> <li>4. Events</li> </ol>

---

Whereas hard facts are taught in a classical lecture style, students should experience aspects of the culture in a lively manner through knowledge dissemination of cultural experts, off-campus seminars at events of traditional cultural origin, as well as learning and engaging in cultural rituals themselves. The aim is to deepen and complement the contents taught in the Orientation Week.

---

**Recommended literature**

---

**Assessment methods**

Seminar paper

---

**Prerequisites**

Participants should have attended the introductory Intercultural Training during the Orientation Week.

---

## Business Storytelling

---

<b>Course title</b>	Business Storytelling
<b>Course ID</b>	296
<b>ECTS</b>	2
<b>Course type</b>	Elective
<b>SWS</b>	2
<b>Semester</b>	Winter and summer
<b>Workload in hours</b>	Total: 60 / In-class: 30 / Self-study: 30
<b>Lecturers</b>	Raphael Fiche

---

At the end of this course, students will be able to:

### Course objectives

- Recognize key elements that go into persuasive storytelling
- Identify types of stories and their purposes
- Create compelling stories to achieve business goals
- Apply acquired knowledge to develop a compelling story to persuade others to think or act in a different way.

---

### Course contents

- Introduction to Business Storytelling
  - Power of Business Stories: when and why to tell them
  - Types of Business Stories and Their Purposes
  - Structuring Your Story to Engage the Audience
  - Storytelling techniques
  - Enhance Your Storytelling Skills
-

## Scientific Communication

<b>Course title</b>	Scientific Communication
<b>ECTS</b>	2
<b>Course type</b>	Elective
<b>SWS</b>	2
<b>Semester</b>	Summer
<b>Workload in hours</b>	Total: 60 / In-class: 30 / Self-study: 30
<b>Lecturer</b>	Prof. Dr. Jeff Wilkesmann
<b>Course objectives</b>	<p>Knowledge:</p> <ul style="list-style-type: none"> <li>• learn to manage a range of resources and skills for effective communication of complex scientific material</li> <li>• learn how to appropriately summarize, paraphrase and reference research content and avoid plagiarism</li> <li>• Scientific communication types and techniques</li> <li>• Presentation Techniques</li> </ul> <p>Skills:</p> <ul style="list-style-type: none"> <li>• learn to cultivate practical communication skills, with particular emphasis on effective writing</li> </ul> <p>Competencies:</p> <ul style="list-style-type: none"> <li>• undertake a substantial practical project in science writing</li> <li>• prepare a poster and perform a scientific pitch</li> </ul>
<b>Course contents</b>	<ul style="list-style-type: none"> <li>• Systematic literature review: Definition of research question/eligibility criteria. Development of search strategy. Title/abstract/full text screening. Data extraction/quality assessment. Synthesis of results/meta-analysis</li> </ul>

- 
- Scientific Communication: The Different Scientific Communication Ways. Scientific writing. Avoiding plagiarism, fabrication and falsification. The good style of writing. Paraphrasing, Summarizing, Referencing. Good and bad practice examples. Scientific Style Conventions. Graphics & Multimedia. Tables. References. Editorial Style Conventions. Effective Writing & Word Usage. Grammar, Punctuation, & Spelling. General Style Conventions. Numbers, Mathematics, & Units of Measure. Inclusivity Style. General Guidelines. Age. ## Informatics I

<b>Course title</b>	Informatics I - Intro to Unix and Python
<b>ECTS</b>	5
<b>SWS</b>	4
<b>Semester</b>	Winter
<b>Workload in hours</b>	Total: 150 In-class: 60 / Self-study: 45 / virtual learning: 45
<b>Lecturer</b>	n.n.

After successful accomplishment, the students can:

### Professional competences

- summarize the challenges of biomedical text analysis
- list various scientific text resources and differentiate them
- outline the motivation behind ontologies for knowledge representation

### Course objectives

### Methodological competences

- implement shell scripts for automating information retrieval, text processing, and semantics processing
- breakdown given shell scripts into various components, tweak it for further purposes, and localize errors
- apply XPath expressions to extract data from XML files
- evaluate a shell script regarding performance considerations and suggest improvements
- apply regular expressions on text to extract relevant information

- 
- find correlations between concepts (e.g., does caffeine lead to malignant hyperthermia?)
  - implement Python programs which can solve simple text processing and automation problems

### **Social competences**

- give constructive feedback to peers in context of peer-assessed exercise

### **Course contents**

- 
- data and text processing using the shell
    - biomedical text resources
    - semantics
    - data retrieval
    - data extraction
    - task repetition
    - XML processing
    - text retrieval
    - text processing
    - pattern matching
    - regular expressions
    - tokens & entities & relations
    - semantics processing
    - classes
    - entity linking
    - performance considerations
  - programming with Python
    - control structures
    - data structures
    - objects & algorithms
-

<b>Assessment method</b>	Written examination, 90 min.
<b>Language of instruction</b>	English
<b>Prerequisites</b>	Introduction to Informatics

---

## Innovation Management for Artificial Intelligence

<b>Course title</b>	Innovation Management for Artificial Intelligence
<b>ECTS</b>	3
<b>Course type</b>	Lecture and seminar
<b>SWS</b>	2
<b>Semester</b>	Winter
<b>Workload in hours</b>	90 hours
<b>Lecturer</b>	Prof. Dr. Patrick Glauner
<b>Course objectives</b>	<p>In recent years, plenty of companies have started to invest in AI in order to remain competitive. However, some 80% of AI project fail in reality. There is clearly an acute need in industry for experts that get the big picture of what needs to be done so that AI adds value to companies. This course has been offered since 2020 and was at that time the first one world-wide to addresses that need. Students will learn a number of challenges, both technical and managerial, that companies typically face when becoming AI-driven companies. They will also learn respective best practices along the entire data journey and how these lead to deployed applications that create real business value.</p>
<b>Course contents</b>	<ul style="list-style-type: none"> <li>• Introduction: how AI is changing our society, selected examples of successful and unsuccessful AI projects and transformations</li> <li>• History and promises of AI: Dartmouth conference, AI from 1955 to 2011, AI winters</li> <li>• Deep learning era: breakthroughs, DeepMind, promises and hypes, no free lunch theorem, AI innovation in China, technological singularity</li> </ul>

- 
- Contemporary challenges: prophets of AI doom, regulation, assurance, explainable AI, ethics, patents, copyright
  - AI transformation of companies: opportunities, challenges, best practices, roles, data strategy, data governance
  - Case studies on how to turn companies into AI-driven companies
-

## Quantum Computing

<b>Course title</b>	Quantum Computing
<b>ECTS</b>	5
<b>Course type</b>	Lecture and seminar
<b>SWS</b>	4
<b>Semester</b>	Winter
<b>Workload in hours</b>	150 hours
<b>Lecturer</b>	Prof. Dr. Patrick Glauner, Prof. Dr. Horst Kunhardt
<b>Course objectives</b>	<p>This class provides students with an introduction to Quantum Computing (QC), which looks promising to solve certain computational problems substantially faster than classical computers. QC began in the early 1980s and in recent years, investment into QC research has increased in both the public and private sectors. Students will acquire knowledge in QC and its applications in various domains such as machine learning and cryptography. They will also be able to elaborate it further in the future, for example in projects or further studies. Overall, QC is a cutting-edge field, with many high-pay opportunities for graduates.</p>
<b>Course contents</b>	<ul style="list-style-type: none"> <li>• Introduction: history, comparison to traditional computing, applications, business potentials</li> <li>• Foundations: complex numbers, complex vector spaces</li> <li>• Systems: deterministic systems, probabilistic systems, quantum systems, assembling systems</li> <li>• Quantum theory: states, superposition, observables, measuring, dynamics, assembling quantum systems, entanglement</li> <li>• Architecture: bits and qubits, classical gates, reversible gates, quantum gates, no-cloning theorem, mixed states</li> </ul>

---

	<ul style="list-style-type: none"> <li>• Selected algorithms: Deutsch's, Deutsch-Jozsa, Simon's, Grover's, Shor's</li> <li>• Theoretical computer science: limits of quantum computing, complexity classes</li> <li>• Quantum computers and programming: goals and challenges, decoherence, physical realizations, quantum annealing, adiabatic quantum computing</li> <li>• Applications: quantum machine learning, quantum cryptography, quantum information theory</li> </ul>

## Mobile and Wireless Networks

<b>Course title</b>	Mobile and Wireless Networks
<b>ECTS</b>	5
<b>Course type</b>	Lectures with exercise sessions, where students demonstrate how they solve problems related to class topics.
<b>SWS</b>	4
<b>Semester</b>	Winter
<b>Workload in hours</b>	Total: 150 / In-class: 60 / Self-study: 90
<b>Lecturer</b>	Prof. Dr. Andreas Kessler

### Course objectives

Upon completion of the course, students should be able to:

- explain the principles and limitations of wireless communication,
- explain important technical aspects of current wireless communication systems,
- compare and contrast different wireless communication systems based on an understanding of shared challenges (such as mobility management),
- explain the principles of medium access control and why they have been designed in a certain way,
- summarise key functions and principles behind different architectures for mobile and wireless communication systems,
- critically evaluate different properties of a mobile communication system, taking into account design considerations, capacity, and limitations in relation to the technology in question.

---

<b>Course contents</b>	<p>The course treats the principles of mobile and wireless, including the function and operation of modern mobile and wireless communication systems and networks related to architecture, protocol, and algorithms. Current wireless systems, such as cellular systems and mobile Internet, including the WLAN standard IEEE 802.11, are used as examples to explain these principles.</p> <p>The course includes components and exercises that treat these topics in-depth.</p> <p>The course covers the following:</p> <ul style="list-style-type: none"> <li>- Radio signals</li> <li>- Coding, modulation, and multiplexing</li> <li>- Medium access</li> <li>- The basic principles of cellular systems and networks - WLAN (e.g. WiFi) and WPAN (e.g. Bluetooth)</li> </ul>
<b>Recommended literature</b>	<p>Schiller, Jochen (2003). Mobile Communications (2nd edition). Addison Wesley</p> <p>Stallings, William and Beard, Cory (2016). Wireless Communications Networks and Systems</p>
<b>Teaching methods</b>	<ul style="list-style-type: none"> <li>- Interactive Lectures</li> <li>- Interactive Exercise Sessions</li> </ul> <p>- In addition for Master students: They need to read a scientific paper of their choice that suits the course content, present the paper in a workshop and lead a discussion around it</p>
<b>Assessment method</b>	Course portfolio
<b>Language of instruction</b>	English
<b>Prerequisites</b>	Students should have basic understanding of computer networks.

---

## Advanced Automation

<b>Course title</b>	Advanced Automation
<b>ECTS</b>	5
<b>SWS</b>	4
<b>Semester</b>	Winter
<b>Workload in hours</b>	Total: 150 / In-class: 60 / Self-study: 90
<b>Lecturer</b>	Prof. Dr. Terezia Toth

In the subject Advanced Automation, students obtain an overview on how programmable logic controllers (PLCs) work, as well as basic hardware and software requirements.

They learn the standardized (IEC61131-3) and manufacturer-specific (TIA Portal) programming options. They learn how to use visualization software for the user interface.

**Course objectives**

The students acquire the basic competence to understand automated processes in the automotive industry, power plants, chemical industry, building technology and transportation. Thus, the students are able to shape the digital transformation of the industry.

### **Professional Skills**

The students are familiar with the concepts and components of a modern automation system including the structure and functionality of industrial communication systems, also with regard to safety and security.

---

They are able to analyse, classify and solve simple tasks in automation technology.

The students know the requirements of hardware and software for a Programmable Logic Controller (PLC). They know the structure and the way a PLC operates. They are able create PLC programs. By using visualization software, they can demonstrate the processes.

### **Methodological Skills**

The application-oriented knowledge allows the students to compare advantages and disadvantages of the individual industrial bus systems, to examine in contrast the advantages and disadvantages of the individual programming languages to find optimal solutions.

### **Soft Skills**

The students work on problems in a focused and independent way.

They can communicate their solutions both verbally and in writing in appropriate technical language.

They learn from mistakes, can assess and improve their own abilities.

They are able to work actively as a team.

---

### **Course contents**

1. Function of SPS
    - 1.1. Hardware requirements
    - 1.2. Current embodiments
    - 1.3. Environmental conditions
    - 1.4. Real-time requirements
-

	<p>2. Programming languages</p> <p>3. Presentation of automation technology with regard to industrial communication</p> <p>3.1. ISO / OSI model in industrial communication</p> <p>3.2. Automation pyramid</p> <p>3.3. Vertical communication</p> <p>3.4. Structure and functionality of common communication systems</p>
